

***Analog Processing and Analytics:
the “Outer Edge”***

Dave Robertson

David.Robertson@analog.com

Analog Processing and Analytics: the “Outer Edge”

Agenda:

The “Lost Art” of Analog Signal Processing

- ▶ *Dinosaurs, Lizards, and Cockroaches . . .*

How Green gets more Analytic: the Importance of EDGE systems

- ▶ *Illustrative Examples*

How Analytics get more Green:

- ▶ *Smart System Partitioning*
- ▶ *Technology Advances*

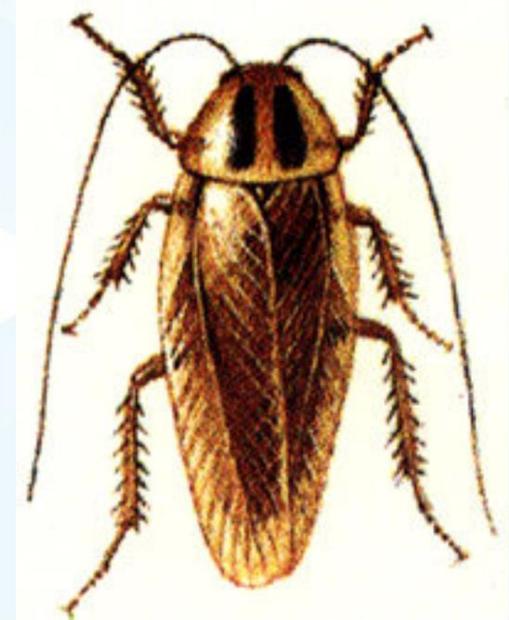

Analog (in a Digital World . . .)

Dinosaurs, or cockroaches ?

Semiconductors from an Analog Perspective

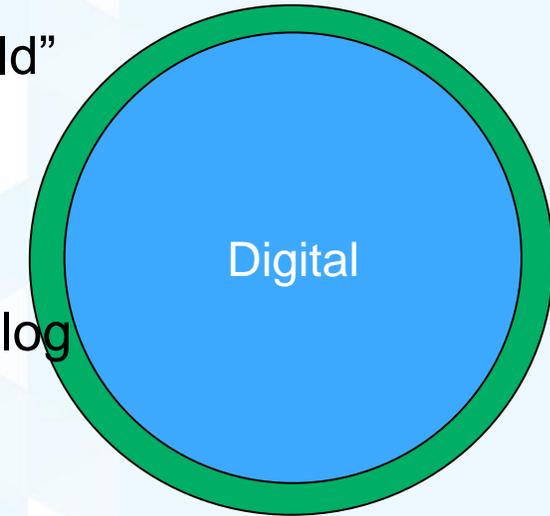

Analog Circuits: Past and Future?

Signal Processing World as an “Expanding Sphere”

“Real World”

Analog

- ▶ **Volume Increases as R^3**
- ▶ **Surface Area Increases as R^2**
- ▶ **Key Question: How “Thick” is the “Crust” (Outer Edge) ?**

The existing paradigm of “Digitize it all and send it to the datacenter” Is not practical

(What the SRC Decadal Plan refers to as the “Data Deluge”)

The EDGE is Critical to Green

The edge is where data is born

And where the action is

A photograph of a forest fire. Bright orange and yellow flames are visible at the base of several tree trunks, rising up the sides of some trees. The background is a hazy, orange glow from the fire. The overall scene is dark, with the fire providing the primary light source.

Wildfire Detection

Rangers in towers with binoculars

Satellite Imaging

Distributed/networked ground sensors

“Networked Ocean”: Woods Hole Initiative

Challenge:

Generate better insights with continuous monitoring across a wide range of biological, chemical and other “ocean vital signs”

Extend observation capabilities across large areas and to full ocean depth

Challenge:

Create an “always on, always connected” ocean, analogous to networks for weather monitoring and forecasting

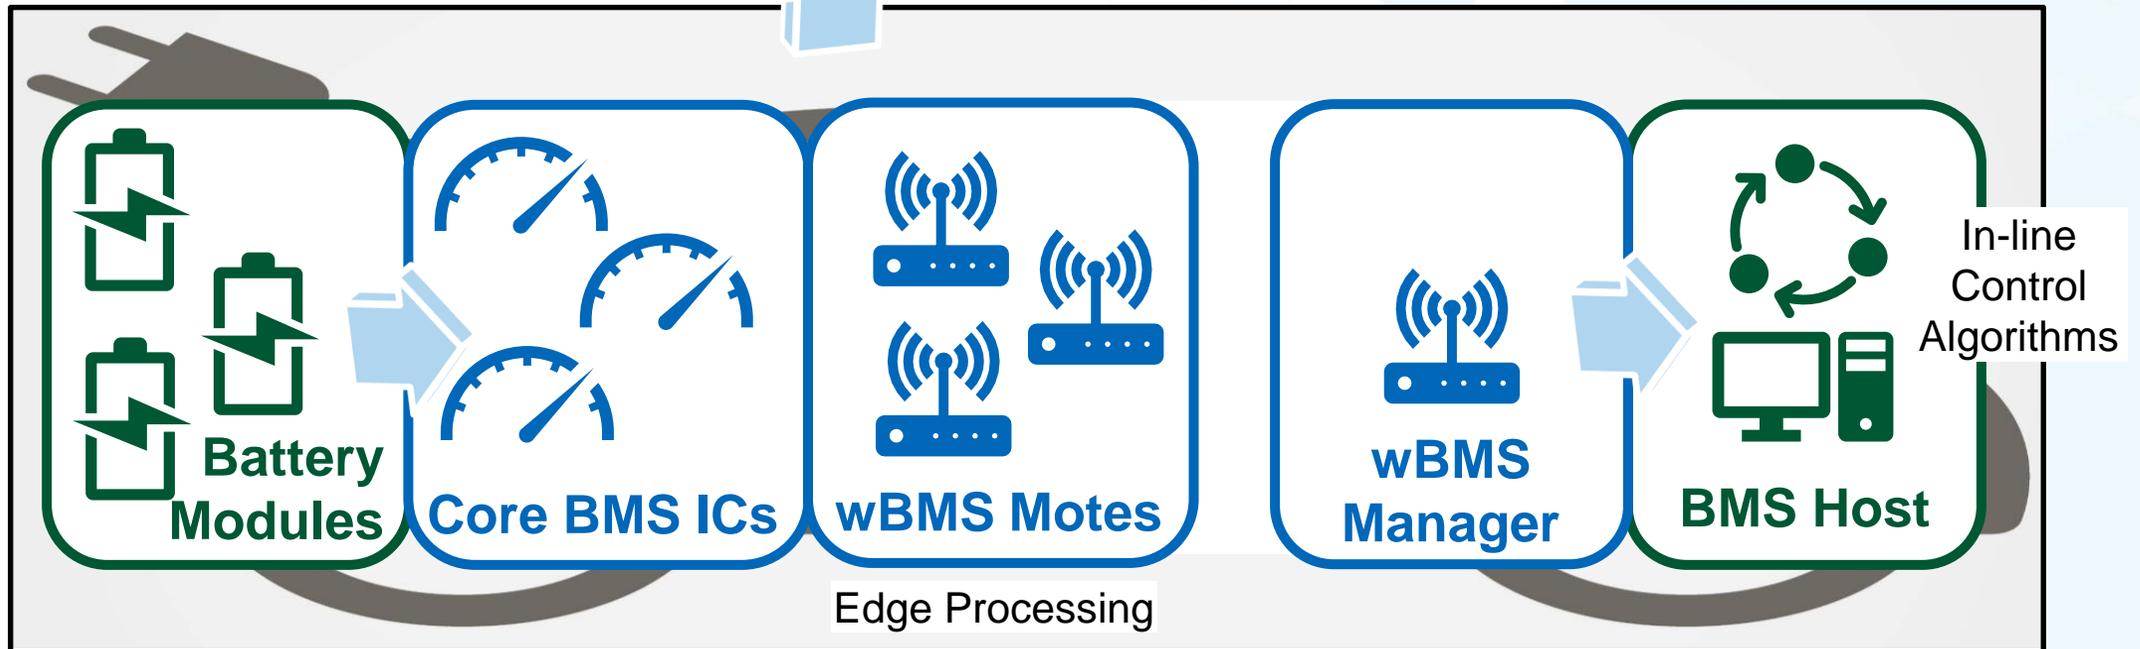

Challenge:

Leverage and scale research insights and analytics in the ultimate “internet of things” challenge of interpreting data from globally distributed sensors and a “networked” ocean

EV Battery Management System (BMS) Technology

- 
- Manufacturing
 - In Service
 - 2nd Life

Partitioning and Innovation: Making Analytics “Greener”

Processing “Chain”

(note– depending on situation requiring action, this may be a “round trip” journey back to an actuator . . .)

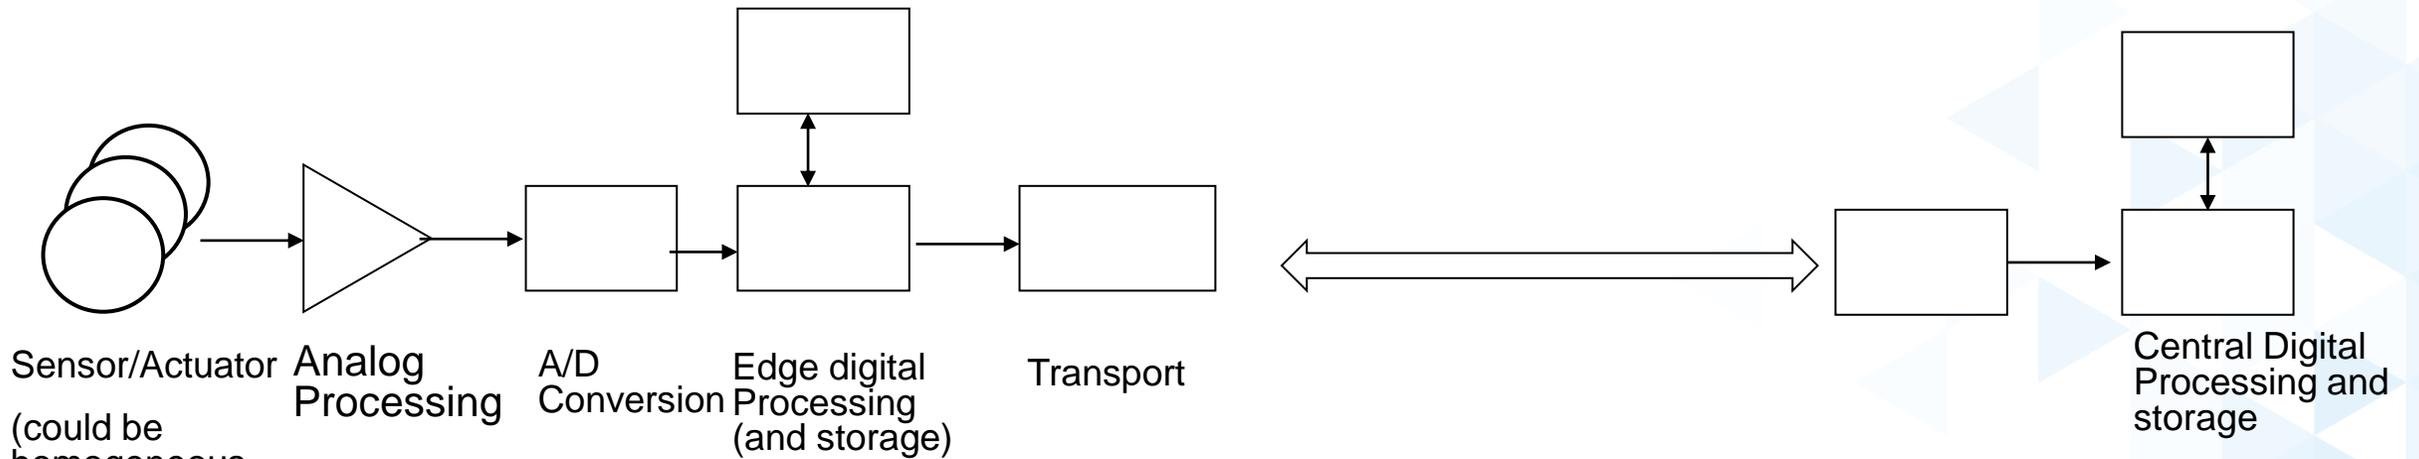

FIGURE OF MERIT: VALUE / COST

Value: Data → Information → INSIGHT (modifiers: location, confidence: accuracy, security: trust)

Cost: Power (as a convenient proxy)

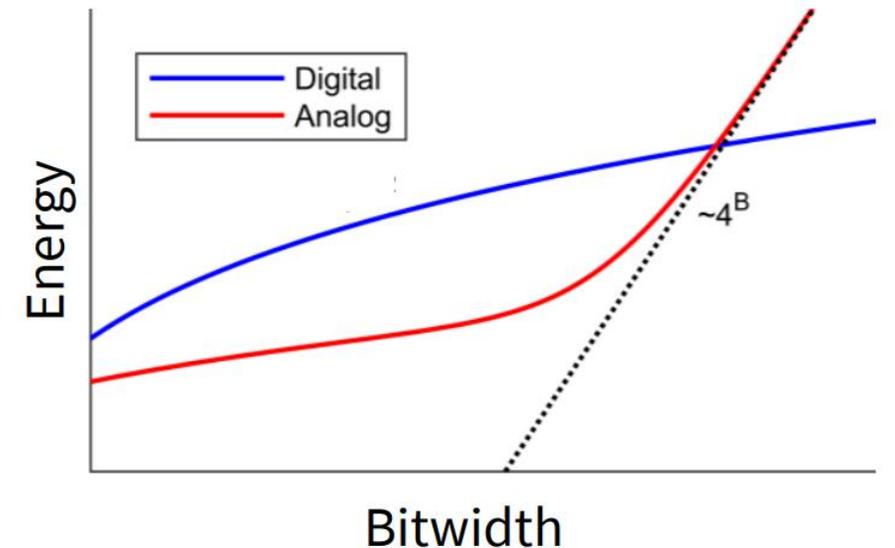

Concept of “Smart Partitioning”

Value and Cost: Technology Dependence

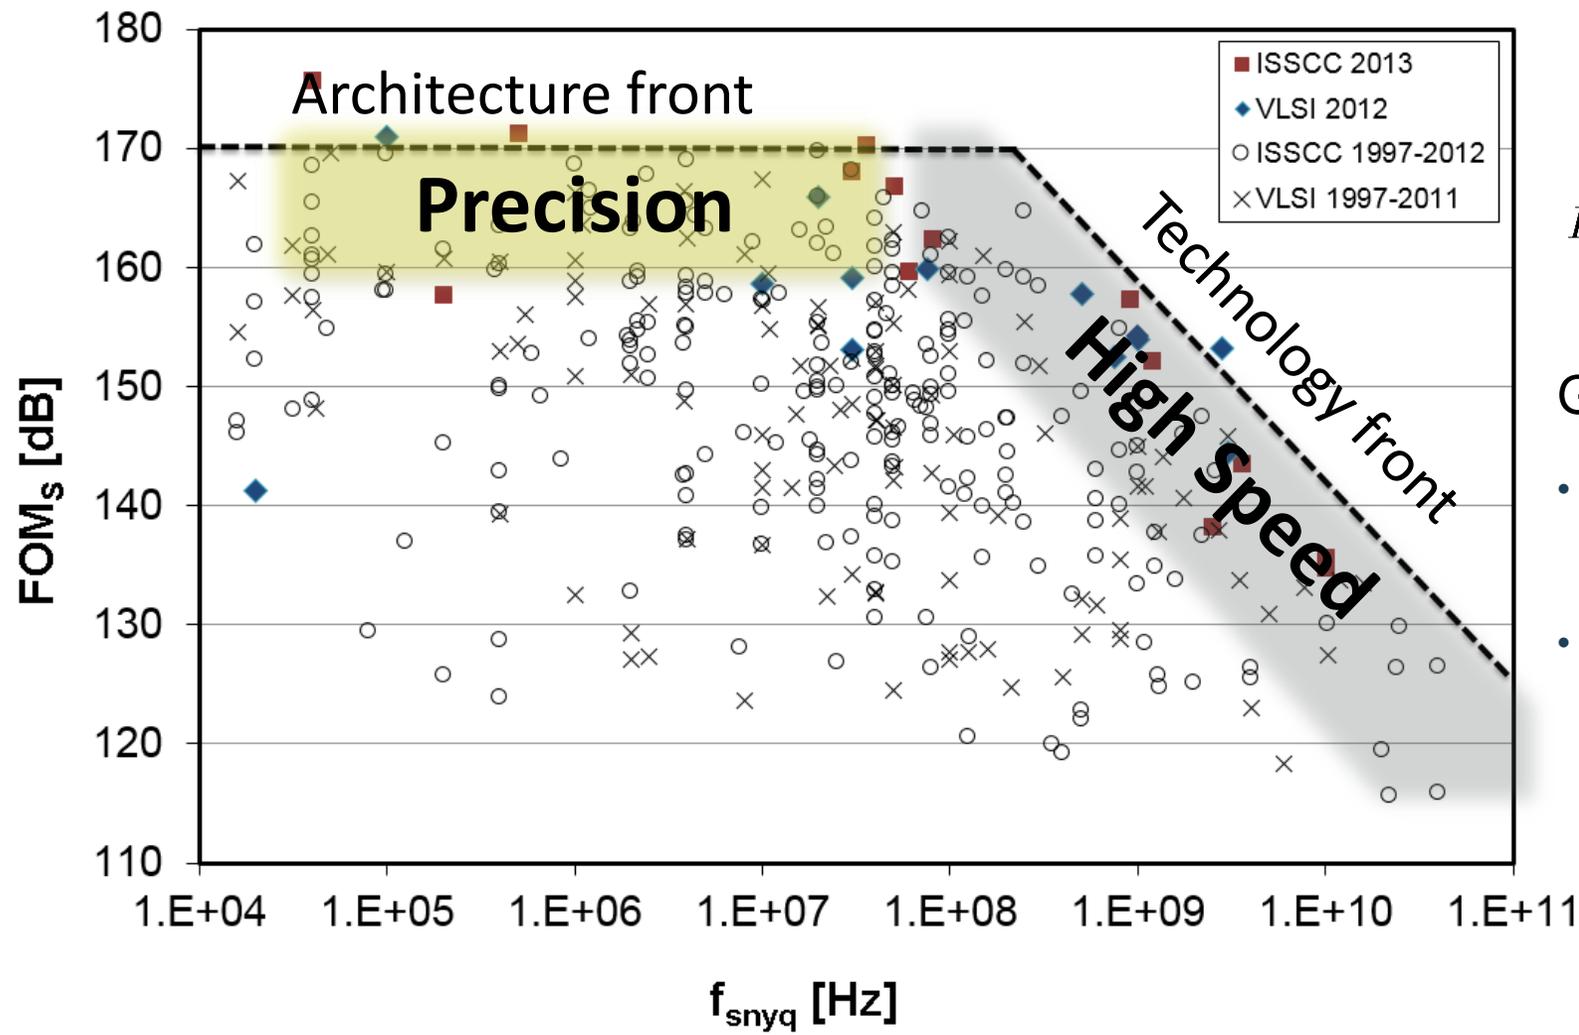

- ▶ There are some “physical limits”, but practical implementations are frequently still far away from those
- ▶ Slopes can be guides: Example: cutting noise in half often requires 4X more power ***
- ▶ “Crossover” points can shift with technology (digital often wins this race)
- ▶ Confidence: often improved through redundancy: can be homogenous or heterogenous (eg sensor fusion)
- ▶ Don't forget location (and related issues of latency)
- ▶ Security as an emerging issue
 - “Data is the new oil” or “Hoarders” ?
- ▶ Optimization vs. Flexibility (cost of change)

Also note significant APPLICATION dependence

M. Verhelst and A. Bahai, "Where Analog Meets Digital: Analog-to-Information Conversion and Beyond," in *IEEE Solid-State Circuits Magazine*, vol. 7, no. 3, pp. 67-80, Summer 2015, doi: 10.1109/MSSC.2015.2442394

ADC Example: Schreier's FOM plot

$$FOM_3 = SNDR_{dB} + 10 \cdot \log \left(\frac{BW}{P} \right)$$

General Observations:

- Frontier advances with time (process and circuit innovation)
- There is a point where additional speed costs efficiency

CLOUD

Big Data Processing
Business Logic
Data Warehousing

HEALTHCARE

AUTOMOTIVE

CONSUMER

COMMUNICATIONS

AEROSPACE
& DEFENCE

INSTRUMENTATION
& MEASUREMENT

Summary Thoughts

- ▶ **Remember the cockroach: Analog is not extinct → it's due for a “comeback”**
- ▶ **The “Data Deluge”/”Hoarders” problem: our goal is insight, not just “more data”**
 - ▶ **This includes the “green” applications**
- ▶ **Moving from “Information theory” to “Insight theory” is highly application dependent: one person's noise is another person's signal**
- ▶ **There is a lot of interesting stuff going on at “the outer edge”**
