

# A Study of COVID-19 Impact on Mental Health via Information Extraction and Querying of Clinical Notes

*COVID CLSAC: ANALYTICS FOR PANDEMIC DECISION SUPPORT*

Marie Humbert-Droz, PhD

Center for Biomedical Informatics Research, Stanford  
University

# Introduction

## • 1/20/2020

- First COVID-19 case identified in the U.S.

## • 1/31/2020

- Declaration of public health emergency (U.S.)
- First confirmed COVID-19 patient in Santa Clara County

## • 3/1/2020

- Declaration of national emergency

## • 3/6/2020

- Stanford Hospital announces it is caring for COVID-19 patients

## • 3/9/2020

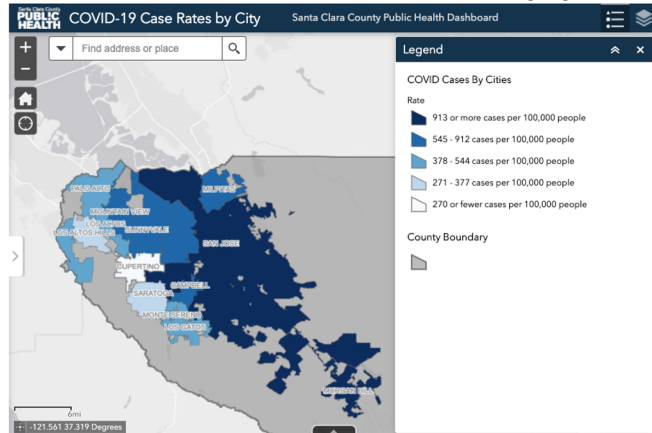

County announces first death from COVID-19

## 20

Shelter-in-place order emitted for Santa Clara County

- COVID-19 widespread but regions touched differently
- Shelter-in-place order in Santa Clara county was the first in the U.S.
- Relatively less admissions at Stanford for COVID-19 compared to UC hospitals
- Syndrome surveillance is primordial for pandemic management
- Address a gap for psychiatric disorders

Trends in Number of COVID-19 Cases in the US Reported to CDC, by State/Territory

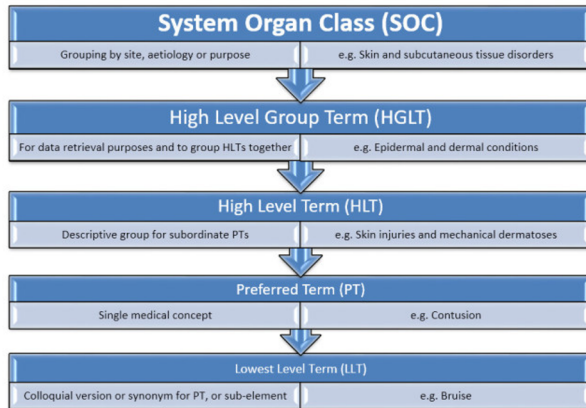

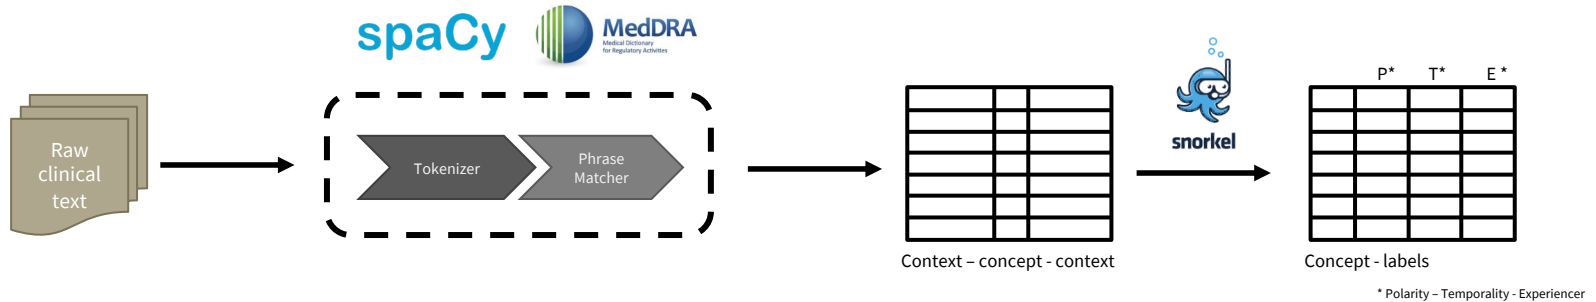

# Introduction – this study

Dataset description	Sept. 1 2019 – June 6 2020
Total number of patients	581,818
Age (years)	
Mean	41
STD	25
Female	323,464 (55.60%)
Male	257,998 (44.34%)
Unknown	356 (0.06%)
Total number of notes	6,550,495
Total number of terms extracted	203,257,129
Total number of encounters	8,431,624
Total number of DX codes	14,783,096

- Extraction of all clinical terms from clinical notes
- Differential analysis of psychiatric disorders mentions
- Comparison with an average over the three years prior
- Analysis of 4 broad age groups

Age group	Age range (years)	Number of patients
1	< 18	78,486
2	18 - 40	76,535
3	40 - 65	108,097
4	> 65	85,318

# Introduction – pipeline and terminology

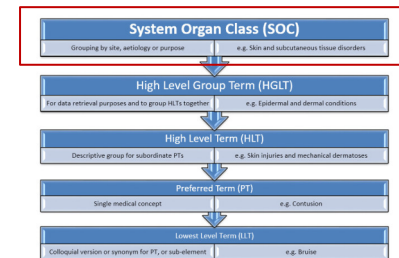

System Organ Class

- └ Psychiatric disorders
  - └ Anxiety disorders and symptoms
    - └ Anxiety disorders NEC
    - └ Anxiety symptoms
      - └ Anxiety
      - └ Nervousness
      - └ Stress
      - └ Tension
    - └ Fear symptoms and phobic disorders (incl social phobia)
    - └ Obsessive-compulsive disorders and symptoms
    - └ Panic attacks and disorders
    - └ Stress disorders
      - └ Acute stress disorder
      - └ Burnout syndrome
      - └ Post-traumatic stress disorder
    - └ Deliria (incl confusion)
    - └ Depressed mood disorders and disturbances
    - └ Manic and bipolar mood disorders and disturbances
    - └ Mood disorders and disturbances NEC
    - └ Psychiatric and behavioural symptoms NEC
    - └ Sleep disorders and disturbances
    - └ Suicidal and self-injurious behaviours NEC

- ~ 970,000 terms:
  - 27 System Organ classes
  - 337 High Level Group Terms
  - 1,737 High Level Term
  - 23,954 Preferred Term
  - 71,603 Lowest Level Term

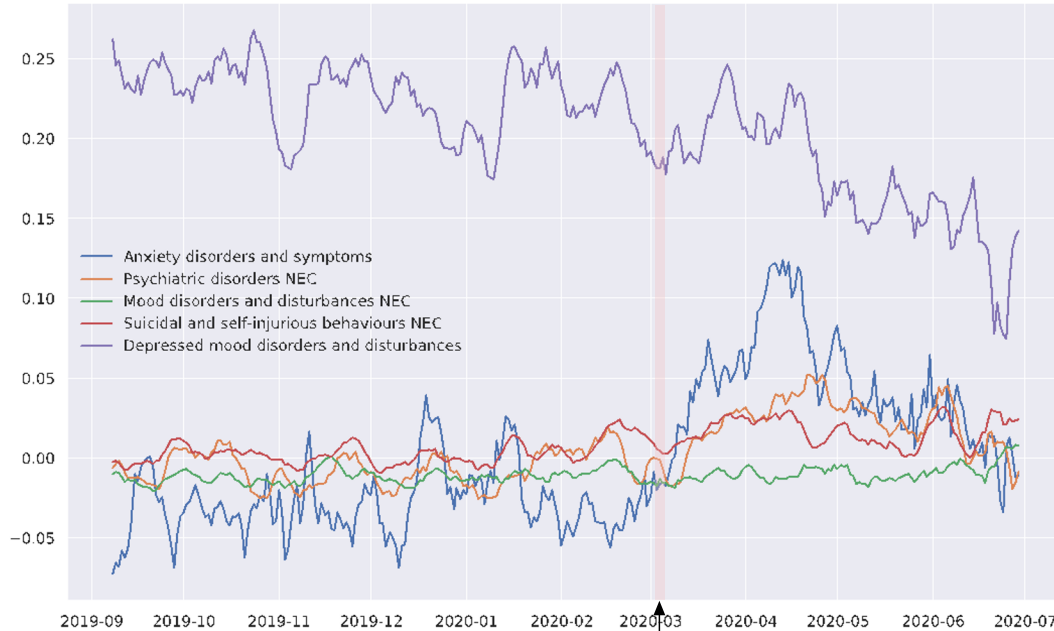

# Results – Term counts per unique patient

March 17 2020: Shelter-in-place order in the San Francisco Bay Area starts

\* 30 days jitter due to deidentification of the data

# Results – Term counts per unique patients: differential with baseline

March 17 2020: Shelter-in-place order in the San Francisco Bay Area starts

# Results – Term counts per unique patients: differential with baseline

March 17 2020: Shelter-in-place order in the San Francisco Bay Area starts

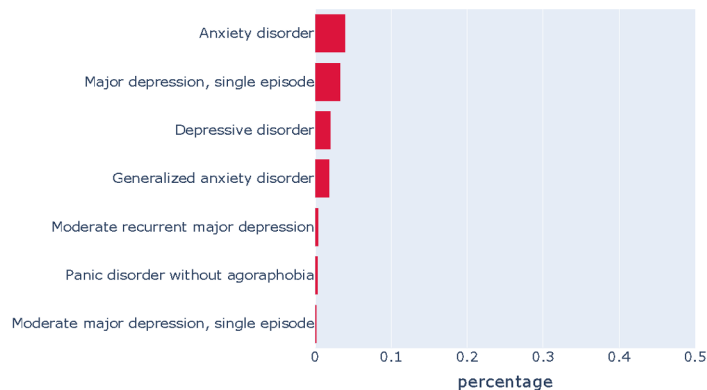

## Analysis of psychiatric disorders mentions

- Considering all patients and all notes from Sept 1 2019 to June 6 2020 shows:
  - Sharp increase in psychiatric disorders related terms mentions per patient almost directly after shelter-in-place order is emitted
  - Majority of the signal comes from anxiety symptoms
- What about diagnosis codes?

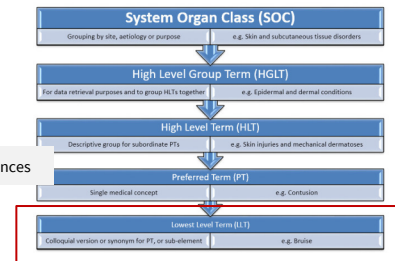

# Top mental health DX code vs NLP extractions from notes

Top 7 psychiatric diagnosis codes

Top 7 psychiatric mentions

- Considering diagnosis codes:
  - 4 out of 7 codes relate to depression, 2 to anxiety and 1 to panic
  - 4 out of 7 mentions belong to Anxiety disorders and symptoms group, 2 to Depressed mood disorders and disturbances
  - The proportion of codes is about an order of magnitude lower than the proportion of mentions in the text
  - Wider range of concepts is captured in the text:
    - Feeling down, worry, fear

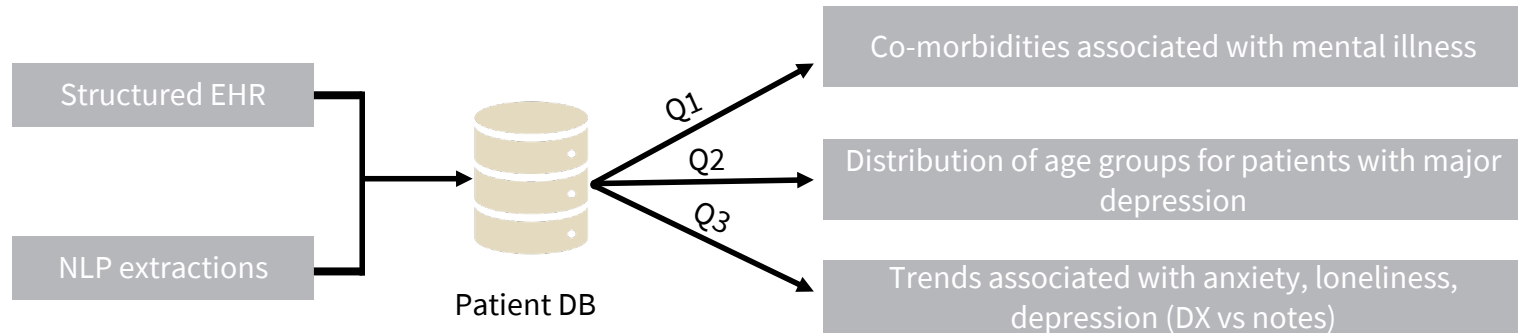

# Monthly trend of top 7 extracted concepts by age group

Anxiety mentions increase for all age groups after the shelter-in-place order. Fear is felt mostly by the youngest group and worry by the eldest group

## Work in progress

- Patient database build for queries
  - Combine information from both structured and unstructured EHR
  - Patient – clinical event data
  - Formulate and answer more complex questions

## Conclusions and outlook

- Ontology-based extraction and weakly supervised labeling allows for rapid extraction of all clinical terms from a large hospital EHR database
- Highlight significant trends following shelter-in-place orders:
  - Substantial increase in psychiatric disorders mention
  - Mostly anxiety
  - All considered age groups
- Information extraction from text is primordial to capture such a trend
- Going further:
  - Validation of extraction tool
  - Use of neural language model to improve NER and assertion status
  - Query with embeddings for higher resolution information
